

New iPhone Application Relieves Parking Ticket Hassle

January 22, 2009 – Tap Tapas announced today the release of the [Parking App iPhone application](http://www.parkingapp.com) (<http://www.parkingapp.com>), which gives iPhone and iPod touch owners a quick and intuitive tool with which to avoid accidental parking violations, and the resulting tickets and towing.

Features of Parking App include:

- Slide to start meter timers – the fastest way to start a timer
- Flexible parking zone rules for adding the streets you park on, anywhere in the world
- At-a-glance street sweeping warnings for all of your favorite locations
- Ability to note your car's location with a single tap, or save a photo or text note
- Alerts with sound and vibration when your meter expires and when you need to move your car for street sweeping (or other restrictions)

Available for \$2.99 in the [iPhone App Store](#), Parking App is the fastest, most intuitive way to avoid the fines and inconvenience of parking tickets and towing and will more than pay for itself almost immediately.

Compatible with any iPhone or iPod touch with operating system version 2.2, the application was designed and developed by Tap Tapas, a cgCraft LLC venture.

About cgCraft LLC

[cgCraft LLC](#) is a Portland, Maine-based design studio with core strengths in web development and user interface design. The studio's broad range of experience and expertise allow them to produce visually powerful and intuitive interfaces for a wide gamut of clients and projects.
